# TDRA UAE Spectrum Allocation Guidelines for UAS C2 Link Band (5030-50

United Arab Emirates Official Regulatory Gazette

## Section 4.1 - C2 Link Quality of Service Requirements

Safety-critical Command and Control (C2) links operating in dedicated aeronautical bands (5030-5091 MHz) or cellular 5G sidelink must maintain a round-trip latency (RTT) strictly under 100ms and packet loss below 1.0 percent. Latency excursions exceeding 250ms mandate immediate transition to autonomous fail-safe procedures.

## Section 4.3 - Urban Canyon Signal Shadowing and Handoff Protocols

In dense urban canyon environments exhibiting cellular shadowing or handoff oscillation, the UAS must adjust altitude to regain line-of-sight with ground gNodeB towers or switch to secondary terrestrial bands.
